Supreeth Shankarghal,
Ex CEO, & Founder (Qf Assets Ltd)

WHAT IS FINANCIAL MODELING?

Financial Modeling is a key skill with application in several areas within banking and finance industry as well as within corporations. In financial modeling, you learn to gather historical information on companies and analyze company / industry performance on various financial parameters. This analysis is then used to build a company's financial model, which in turn is key to projecting a future financial performance. Based on this model companies / investors can arrive at a suitable valuation for the companies.

STUDENT Reviews

Richad Chetri

This course has really benefited me especially in my work life, segregating data took me hours before attending the course, now things are a lot simpler. If done properly this course would take you a step ahead than the rest.

Shani Kadam

Work in the financial company I continuously need to deal with the financial data this course help me to understand concept more clearly and also now working with data got much easier thanks to mentor me careers.

Atharva Ratnakar

Precise sessions and awesome hands on training. All the Financial Concepts learnt I can remember till date. All thanks to their trainer and his amazing training methodology. The learning from this course have been useful for me in my MBA.
